**ANNUAIRE PLUVIOMETRIQUE
DE TUNISIE
1991-92**

Cet annuaire pluviométrique 1991-92 a été réalisé au Service Fichiers et Annuaire, de la Direction des Eaux de Surface. Sa réalisation est le résultat d'une collaboration entre:

* Les services centraux représentés par MM. Ben Khélifa M., Gmati A., Mechichi M.

* et les Arrondissements régionaux qui n'ont cessé de déployer leurs efforts de conscientisation et de conviction de nos observateurs de l'intérêt de relevés pluviométriques fiables, mission contraignante mais très importante par son impact sur tous les secteurs de la vie.

Nous voulons rendre hommage à toutes les équipes régionales : Arfaoui, Ayachi, Batti, Bayounès, Chelli, Ellouz, Ferjani, Fouzai, Ghanmi, Hamed, Hichri, Jelliti, Mattoussi, Menzli, Sghaier, Stita, Zitouni, Zribi....

et à tous les observateurs, de la station de Remada à celle de Mejen Essef, ou de Kef Enssour à Jebel Bou Lahnech ou Ain Taga Kef Chegaga... qu'ils soient tous remerciés pour leur contribution à l'amélioration de notre connaissance de la pluviométrie de la Tunisie.

Mme Benzarti Z.
Chef du Service Fichiers et Annuaire.

INTRODUCTION

I - PRESENTATION DE L'ANNUAIRE:

La présente publication contient toutes les observations pluviométriques journalières mensuelles et annuelles faites dans 672 stations pluviométriques de la Tunisie durant l'année hydrologique 1991-92 qui s'étend du 1er Septembre 1991 au 31 Aout 1992.

La répartition des postes pluviométriques dans le présent annuaire suit la division hydrométrique du pays en 7 grands bassins portant des numéros de codification de 3 à 9 :

- Le bassin 3: couvre l'extrême-Nord de la Tunisie c.à.d. les pays forestiers du Nord-Ouest et la région des lacs d'Ichkeul et de Bizerte.
- Le bassin 4: comprend le bassin versant du Miliane et le Cap Bon.
- Le bassin 5: correspond au bassin de la Mejerda.
- Le bassin 6: couvre tout le Centre de la Tunisie (Zéroud, Merguellil, Nebhana).
- Le bassin 7: comprend le Sahel de Sousse et de Sfax.
- Le bassin 8: s'étend de la limite sud des bassins 6 et 7 (Centre et Sahel) jusqu'au Nord du Chott el Jérid.
- Le bassin 9: couvre l'extrême-Sud jusqu'aux frontières Algériennes et Lybiennes.

A l'intérieur de chaque bassin, les postes pluviométriques sont classés par ordre alphabétique et portent des numéros de codification composé de dix chiffres dont:

Les trois premiers chiffres indiquent le continent (1 pour l'Afrique) et le pays (48 pour la Tunisie) d'appartenance de la station.

Les cinq chiffres suivants indiquent le numéro mécanographique de la station avec comme premier chiffre le numéro du bassin auquel appartient le poste.

Les deux derniers chiffres indiquent le gouvernorat dans lequel se trouve le poste pluviométrique. Les numéros correspondant à chaque gouvernorat sont les suivants:

01 Jendouba, 02 Béja, 03 Le Kef, 04 Siliana, 05 Bizerte, 06 Tunis, 07 Zaghouan, 08 Nabeul, 09 Kasserine, 10 Sidi Bouzid, 11 Kairouan, 12 Sousse, 13 Monastir, 14 Mahdia, 15 Sfax, 16 Gafsa, 17 Tozeur, 18 Gabès, 19 Mednine, 20 Kébili, 21 Tataouine, 22 Ariana, 23 Ben Arous.

Une liste complète des postes pluviométriques (numéro mécanographique et nom de la station avec Latitude, Longitude et Altitude correspondantes) figurant dans cette publication est donnée dans les pages qui suivent.

II - PRESENTATION DES RELEVES PLUVIOMETRIQUES:

1/ La première partie de la présente publication est une analyse sommaire de la pluie en Tunisie durant l'année agricole 1991-92. A cet effet 88 stations ont été choisies (à raison de 2 à 5 par gouvernorat) pour caractériser la situation pluviométrique au cours de cette année. Des graphiques et des cartes d'isohyètes mensuelles, saisonnières et annuelles illustrent cette analyse.

2/ La deuxième partie comprend les relevés pluviométriques journaliers. Ces relevés se présentent sous forme de tableaux annuels par station et sont groupés par bassin et par ordre numérique. Les données pluviométriques ont été saisies et traitées sur micro-ordinateur sous "PLUVIOM", logiciel de gestion de données pluviométriques élaboré au Laboratoire d'Hydrologie de l'ORSTOM.

Sur ce tableau, un point (.) indique un jour sec
un tiret (-) indique un relevé absent
une croix (+) indique un cumul ultérieur

Au bas de chaque tableau, nous donnons :

- + Les totaux pluviométriques mensuels (complets ou incomplets)
- + Pour chaque mois, quand les observations mensuelles sont quotidiennes (c-à-d qu'il n'y a pas de cumul) et complètes, la pluie maximale en 24 heures. Quand les observations de tous les mois sont complètes, la pluie quotidienne maximale de l'année est soulignée de 4 étoiles.
- + Le total annuel pour les années complètes ou le total partiel pour les années incomplètes

Quant à la critique des données, elle se fait une première fois à la réception du bulletin pluviométrique. Elle consiste à comparer les relevés de postes voisins et éliminer toute observation qui semble aberrante. Une deuxième critique se fait à la préparation de l'annuaire par une comparaison des bulletins avec leur double et avec les souches afin de noter les rectifications éventuelles. Les valeurs qui semblent vraies ou acceptables sont reproduites fidèlement telles qu'elles sont sur le bulletin d'observation. Aussi quelques pluviométries journalières sont décalées d'une journée, les observateurs ont en effet reçu la consigne de faire leurs observations quotidiennes à 7h du matin et de marquer les quantités mesurées à la date de la veille, mais malheureusement cette consigne n'a pas toujours été respectée. Toutefois, les décalages chevauchant sur 2 mois ont été corrigés .

En conclusion, nous prions Messieurs les utilisateurs de nous communiquer leurs remarques et leurs suggestions afin d'apporter les améliorations nécessaires à nos futures publications.

**ANALYSE DE LA SITUATION PLUVIOMETRIQUE
DE L'ANNEE 1991-92**

Aperçu sur la pluviométrie de l'année 1991-92

La pluviométrie de l'année 1991-92 a été satisfaisante sur l'ensemble du pays, les quantités de pluie ont été assez importantes. On a enregistré:

- * Plus de 1500 mm de pluie sur les sommets du Nord-Ouest (1613 mm à Ain Draham, 1516 mm à Hammam Bourguiba)

- * Plus de 600 mm de moyenne pluviométrique annuelle dans les gouvernorats de Bizerte (680 mm à Ras jebel), de Béja (718 mm à Tébourouk), de Jendouba (575 mm à Ghardimaou), de Tunis (644 mm à Tunis Manoubia), de Nabeul (822 mm à Kélibia) et de Sousse (520 mm à Sidi Bou Ali).

- * Plus de 500 mm de moyenne pluviométrique annuelle dans les gouvernorats de Siliana (524 mm à Siliana) et de Zaghuan (687 mm à Zaghuan)

- * Plus de 400 mm au gouvernorat du Kef (454 mm à Tajerouine), de Kairouan (516 mm à Sidi Amor Bou Hajla) et de Monastir (423 mm à Moknine)

- * Plus de 300 mm dans les gouvernorats de Mahdia (405 mm à Bou Merdès) et de Kasserine (528 mm à Tala)

- * Plus de 200 mm dans les gouvernorats de Sidi Bou Zid (398 mm à Sidi Bou Zid), Sfax (305 mm à Menzel Chaker) et Mednine (248 mm à Beni Khedache)

- * Plus de 100 mm dans les gouvernorats de Gafsa (207 mm à Sidi Boubaker), de Gabès (201 mm à Matmata) et de Tataouine (209 mm à Tataouine)

- * et moins de 100 mm au gouvernorat de Tozeur (88 mm à Nafta) et de Kébili (58 mm à Douz)

Cela correspond à un bilan positif pour l'ensemble du pays exceptés les gouvernorats de Kébili et de Gabès où les déficits ont dépassé 20% du total annuel moyen et les gouvernorats de Sfax, de Tozeur et de Mednine qui ont enregistré un léger déficit, inférieur à 10%.

Quant aux excédents, ils ont dépassé 40% dans les gouvernorats de Nabeul de Sousse et de Kairouan
20% dans les gouvernorats de Tunis
10% dans les gouvernorats de Béja, du Kef, de Siliana, de Zaghuan, de Mahdia, de Kasserine et de Sidi Bou Zid

Les excédents les plus forts ont été enregistrés à Sidi Amor BouHajla (100%), Sidi Bou Ali (90%), Sidi Bou Zid (64%), Kélibia (63%), Nabeul (54%) ...

A l'échelle saisonnière, l'Automne a été excédentaire dans tous les gouvernorats de la Tunisie du Nord ainsi que dans ceux de Sousse, de Kairouan et de Tozeur. Des excédents supérieurs à 40% ont été enregistrés aux gouvernorats de Béja, du Kef, de Zaghouan, de Nabeul et de Tozeur. Les déficits ont été faibles (inférieurs à 10%) dans les gouvernorats de Monastir, de Kasserine et de Gafsa mais très forts dans le reste des gouvernorats du pays (de 20% dans le gouvernorat de Mahdia à 87% dans celui de Kébili).

La saison d'Hiver a été excédentaire sur l'ensemble du pays exceptés les gouvernorats de Béja, de Jendouba, du Kef dans le Nord du pays, et de Tozeur, de Kébili et de Gabès dans le Sud. Les excédents dépassent 40% dans les gouvernorats de Nabeul, de Sousse, de Mahdia, de Sfax, de Kasserine de Sidi Bou Zid et 100% dans le gouvernorat de Kairouan alors que les déficits dépassent 20% dans les gouvernorats de Jendouba (33%) de Béja, de Tozeur et de Gabès

La saison de Printemps a été excédentaire sur tout le pays. Les quantités de pluie ainsi que les excédents (de 7 à 80%) ont été assez importants: 639mm et 63% d'excédent à Ain Draham, 309 mm et 114% d'excédent à Sejnane, 283 mm et 74% au Krib, 138mm et 109% à Sidi Bou Zid...

L'Eté a également été relativement pluvieux dans les gouvernorats de Bizerte, de Jendouba, de Béja, de Tunis, de Nabeul, de Mahdia, de Gabès, de Médnine et de Tataouine: 53 mm à Tunis Manoubia et à Nefza, 44 mm à Tinja, 72 mm à Ain Draham, 70 mm à Kélibia...

Au total, le nombre de saisons excédentaires est de

- * Quatre pour les gouvernorats de Tunis et de Nabeul,
- *Trois, l'Automne, l'Hiver et le Printemps pour les gouvernorats de Siliana, de Zaghouan, de Sousse et de Kairouan,

- l'Automne, le Printemps et l'Eté pour les gouvernorats de Bizerte, de Béja et de Jendouba

- l'Hiver, le Printemps et l'Eté pour les gouvernorats de Mahdia, de Médnine et de Tataouine

- * Deux saisons seulement, Automne et Printemps, pour le gouvernorat du Kef, Hiver et Printemps pour les gouvernorats de Monastir, de Kasserine, de Sidi Bou Zid, de Sfax et de Gafsa et Printemps et Eté pour le gouvernorat de Gabès.

- * Les gouvernorats de Tozeur et de Kébili n'ont connu qu'une seule saison excédentaire : l'Automne pour Tozeur et le Printemps pour Kébili.

Au niveau mensuel, la situation a été marquée par un nombre de mois excédentaires assez important (5 à 8) sur la Tunisie du Nord malgré un épisode relativement sec et assez long (Novembre-Décembre-Janvier) particulièrement dans les gouvernorats de Bizerte, de Jendouba, et de Béja. Au Centre et au Sud, on compte 5 à 6 mois excédentaires (9 mois excédentaires pour le Sahel de Bousse) exceptés les gouvernorats de Mahdia, de Sfax, de Tozeur, de Kébili et de Tataouine qui n'ont totalisé que 4 mois excédentaires et le gouvernorat de Gafsa qui n'en a enregistré que deux.

Les mois de Septembre, Janvier, Février, Avril et Mai ont été les mois les plus pluvieux alors que les mois de Décembre et de Mars ont été les plus déficitaires.

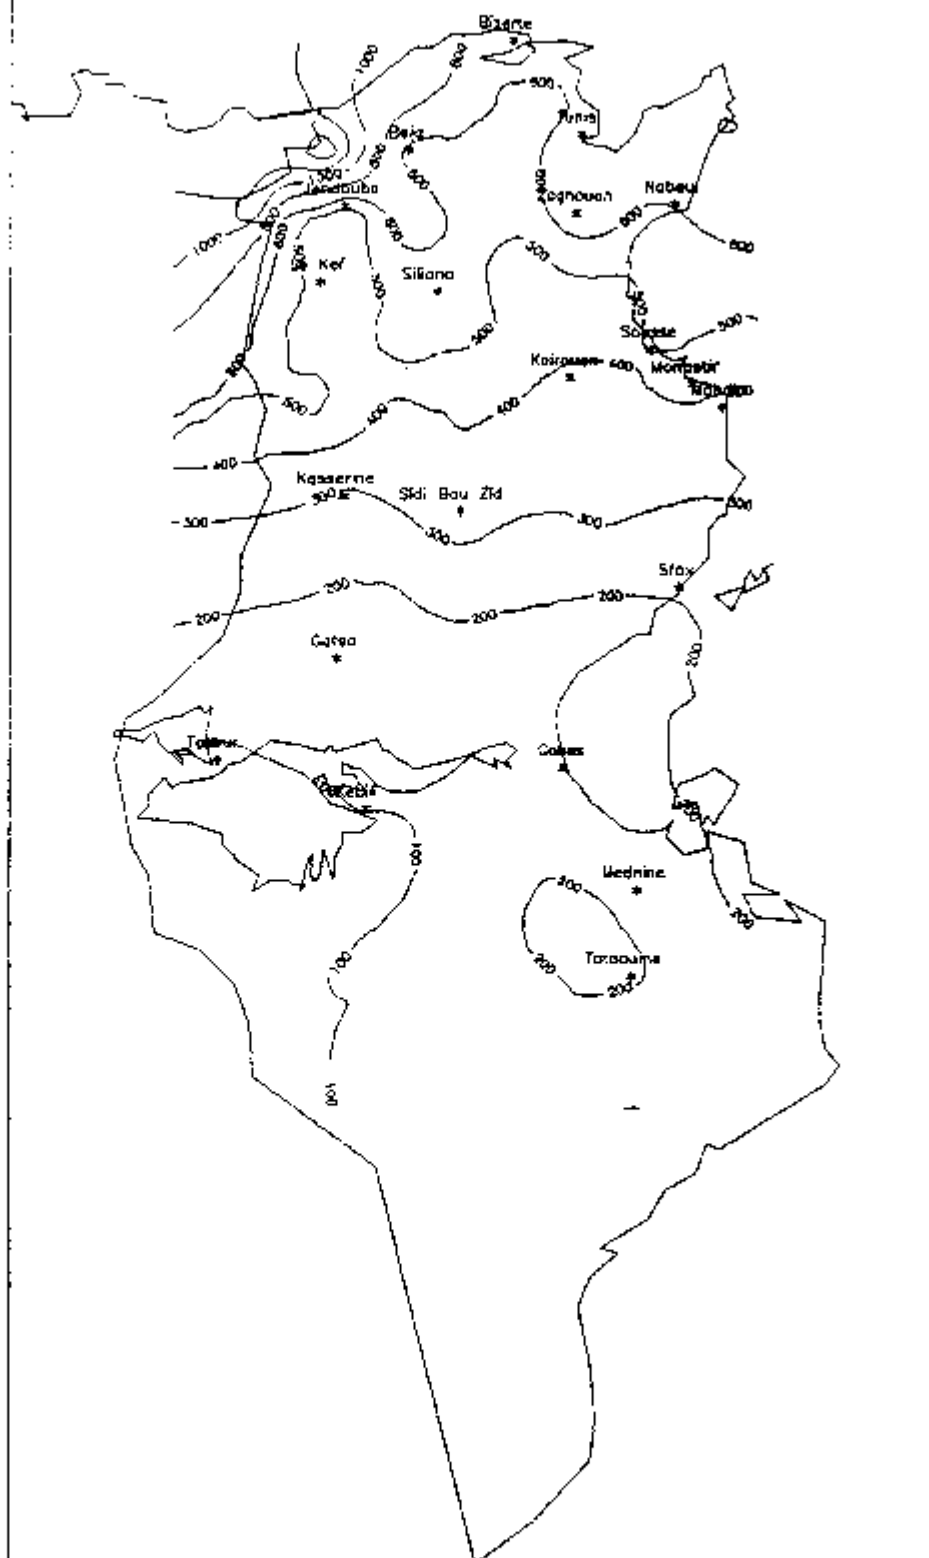

Parmi les événements exceptionnels de cette année nous citons :

Le 23 Mai, des chutes de grêle ont causé des dégâts assez importants dans les gouvernorats de Sidi Bou Zid et de Kasserine

Le 1er et le 2 Juillet, des pluies exceptionnelles pour le mois ont déversé 37 mm à Tunis, 57 mm à Kélibia, 25 mm à Béja...

En Conclusion l'année 1991-92 a été dans l'ensemble une bonne année pluvieuse. Malgré une répartition inégale entre les régions, la répartition des jours pluvieux a été assez équilibrée dans l'année (les mois pluvieux étant répartis de Septembre à Mai), et les épisodes pluvieux étant assez copieux .
